Transforming Application Onboarding for a Global Insurer

Simeio Identity Orchestrator Migrates more than 400 Databases

Industry: Insurance | **Size:** >20k | **Annual Revenue:** >$5 BN | **Service Area:** Global

THE CHALLENGE:

Onboarding & Compliance Woes

A top-10 global property and casualty insurer faced a critical compliance deadline that required the rapid onboarding of over 400 databases across six complex types. Their internal IAM infrastructure had become outdated and inefficient, leading to delays in onboarding processes and growing compliance risks—particularly with SOX and access certifications.

The client's existing systems lacked the automation and scalability needed to meet both regulatory demands and business expectations. Manual onboarding and a fragmented certification pipeline put their timelines at serious risk, threatening audit readiness and long-term operational agility.

With no room for error and a hard compliance deadline, the organization urgently needed a proven solution—and a partner who could move fast.

Simeio Competitive Edge

Simeio was brought in based on a trusted referral from a senior leader who had partnered with Simeio previously and experienced their delivery excellence firsthand.

Unlike prior providers, Simeio demonstrated not only deep IAM expertise but a proven methodology, backed by their proprietary Rapid Onboarding Framework (ROF), a component of the Simeio Identity Orchestrator (IO) platform. Simeio assured the client of full database onboarding in less than three months—with full compliance and future scalability in mind.

The client's decision to re-engage with Simeio was driven by trust, experience, and confidence in a partner who could execute under pressure.

Comprehensive Solution

Simeio began by deploying its Rapid Onboarding Framework (ROF)—part of the Simeio Identity Orchestrator (IO). This allowed the team to onboard 470 databases in just six weeks—nearly half the projected time.

Simeio's experts streamlined the certification pipeline, eliminated manual bottlenecks, and provided a centralized onboarding platform with self-service capabilities to support future scalability. The platform enabled secure integration, audit-friendly workflows, and faster time-to-value—without sacrificing user experience or compliance assurance.

By unifying onboarding workflows into a single pane of glass through Simeio IO, the client gained not only speed and compliance, but also a sustainable architecture to handle future identity growth.

Transformative Results

- **470 Databases** Onboarded in 6 Weeks

- **100% Compliance** with SOX and Audit Requirements

- **Onboarding Time Reduced** from 6 Months to 6 Weeks

- **Conversion to Self-Service** Onboarding via Simeio IO

- **Coverage** of 6 Complex Database Types

- **Future-Ready Platform** Enabling Sustainable IAM Growth
